

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

Immediate Recall

The examiner shows the respondent a picture for 10 seconds and then gives the respondent a piece of paper and instructs them to draw the picture from memory. This is repeated three times with different images. The first two pictures contain a single image, but the last picture contains two images that are side by side.

Delayed Recall

After a predetermined amount of time, examiner asks the respondent to draw as many pictures as they can recall. The respondent is informed the pictures do not have to be drawn in the same order as they were shown. After completing these drawings, the respondent is asked which image they were shown first.
