

Data Collection Worksheet

Please Note: The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

I am going to describe some behaviors to you. Try to recall how many times you have done this thing during the last year.

Coding:

"HOW MANY TIMES THIS YEAR....":

000 = respondent did not engage in behavior in the past year

001 - 700 = number of times

777 = dont know

999 = missing

Scoring:

Typically researchers use this information to capture which criminal and delinquent activities occurred and the prevalence during the last year.

Scoring can take the form of counting up the number of items endorsed or by calculating the sum of the item frequencies, where the nonendorsed items are scored "0". In addition, types of antisocial and criminal behaviors can be assessed (alcohol and drug use, minor delinquency, serious delinquency, violence, etc.). A Guttman scale may be used to classify the more serious or violent offenses (see Loeber et al., 1998). Researchers should consult with the original sources and other publication for examples of scoring techniques.

If a summary delinquency scale is being prepared, the Psychosocial Working Group recommends that items that are not against the law be removed from the scale

(e.g., ran away, lied about age [unless some illegal context is specified], provided false name or alias [unless some illegal context is specified]). In addition, items that overlap, such as stealing something worth \$5 to \$100 and taking something from the store without paying (shoplifting) should not count as two endorsed items, only one.
