

## Data Collection Worksheet

**Please Note:** The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

### **Summary of the Short Inflammatory Bowel Disease Questionnaire (SIBDQ):**

The Short Inflammatory Bowel Disease Questionnaire (SIBDQ) consists of 10 questions taken directly from the original 32-question Inflammatory Bowel Disease Questionnaire (IBDQ). The SIBDQ consists of questions scored in four domains: bowel symptoms, emotional health, systemic systems, and social function. Respondents are asked to provide a rating from 1 to 7 on quality-of-life measures during the last 2 weeks.

The questionnaire provides a score ranging from 10 (lowest score) to 70 (highest score). To obtain the score, tabulate the answers to each of the 10 questions; the value associated with the answer ranges from 1 to 7. Higher scores represent higher health-related quality of life with less impact from inflammatory bowel disease (IBD).
