

## Data Collection Worksheet

**Please Note:** The Data Collection Worksheet (DCW) is a tool to aid integration of a PhenX protocol into a study. The PhenX DCW is not designed to be a data collection instrument. Investigators will need to decide the best way to collect data for the PhenX protocol in their study. Variables captured in the DCW, along with variable names and unique PhenX variable identifiers, are included in the PhenX Data Dictionary (DD) files.

The Achenbach System of Empirically Based Assessment (ASEBA®) - Adult Self Report (ASR) and Adult Behavior Checklist (ABCL) are forms containing DSM-oriented and other syndrome scales to assess adaptive functioning, personal strengths, empirically based syndromes, substance abuse, internalizing, externalizing, and total problems. The ASR is a self-report instrument. The ABCL is filled out by someone who knows the adult being assessed. Both forms are scored against norms of age and gender and national statistical probability.

The Achenbach System of Empirically Based Assessment (ASEBA) - Adult Self Report (ASR) and Adult Behavior Checklist (ABCL) are proprietary protocols, and administration requires a license from ASEBA®.
